DETAILED ACTION

1. This office action is in response to the application filed December 14, 2001.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

3. Claims 1,2, 7 and 8 are rejected under 35 U.S.C. 102(e) as being anticipated by Hirai et al (U.S 6,388,321).

4. Hirai (Fig 2; Column 6, Lines 35-37 and 42-43) discloses a wafer (7) having a B-stageable underfill material deposited on one face of the wafer, the B-stageable underfill comprising two chemical compositions, a first composition (4) and a second composition (5) having curing temperatures sufficiently separated to allow the composition with the lower curing temperature, the first composition to cure without curing the second composition, characterized in that the first composition has been cured and the second composition is uncured and are separated by at least 30°C.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2827

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Allowable Subject Matter

7. Claims 3-6 and 9-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8. The following is a statement of reasons for the indication of allowable subject matter: The prior art does not disclose or make obvious a B-stageable underfill comprising a first and second composition, wherein the first composition is selected from a group consisting of acrylic compounds, cycloaliphatic epoxy compounds and bismaleimide compounds, and the second composition is an epoxy compound or an epoxy compound and an imidazole/anhydride adduct, wherein the second composition has a higher curing temperature characterized in that the first composition has been cured and the second composition is uncured.
